Problems Faced By the Market

For a very long time, we have been restricted by the norms of traditional money transaction methods followed by the market. Mostly all transactions were based on hard cash. This approach created a lot of inconvenience and finally Cashless transactions were adopted and preferred by people. Money transfer from one country to another became easier but it still involved visiting the banks, filling up papers, submitting proofs etc.

While transfer of funds from one location to another seemed like a comfort, it also comes with a variety of drawbacks. The approach adopted by the institutions demanded the user to shell out a high amount as transactions fees across borders. To make things worse, various other charges were also applied. Making the fund transfer experience even more bitter.

Moreover, the transfer of funds across border was a time consuming process and took couple of days or more for our recipient to receive the transferred funds. Certain governing laws and administrative norms were also challenging. Making the entire process of money transfer a troublesome task.

KeniCoin was designed with a view to change the inefficient traditional methods of money transactions. KeniCoin Platform aims to build a decentralized global network, based on shared benefits for its members. Effortless, Secure, cost-effective, swift, a steady means of payment and exchange are our priorities. In order to meet these goals, KeniCoin platform is structured in a thoughtful manner to offer a secure wallet, integrated exchange, and specialized KeniCoin coins, designed with built-in rate constancy. Engineered for anyone interested in entering the crypto world, KeniCoin allows even the newest user to learn and reap the benefits of this new technology.

What is KeniCoin and how it resolves the issues

KeniCoin (KNC) is a Ethereum ERC20 based crypto-currency that is developed by a combination of blockchain technology experts from Germany, India and Israel with over 10 years of experience in the field of blockchain technology and Artificial Intelligence. KeniCoin is unique in the area of cryptocurrency because it is the only coin that is backed by real businesses that make use of it exclusively as the only medium of exchange. This very reason makes KeniCoin one of the most demanded, least available and definitely fastest appreciating cryptocurrency of all times.

KeniCoin is a highly advanced money transaction method which allows instant transfer of ownership from one member to another across borders. KeniCoin can be accessed whenever and wherever you are in need. There is no restrictions or boundaries as to how much you can buy, sell, save or transfer. Moreover, the system is decentralized and no administrative barriers are applicable while transacting in KeniCoin. This facilitates purchasing or selling products and services, transferring money to your family members or friends in need, instantly without any issues. All these facilities come with an added advantage of extremely low cost transaction charges.

The transactions made through KeniCoin are extremely safe and secure. Payments are processed through secured servers at all times. The platform used in designing the system eliminates the chance of fraud, censorship or third-party interference. The application functions exactly as it is designed to function. You will receive prompt confirmation of your transactions. All the applications are specially designed to be user friendly and reliable.

In short KeniCoin serves as the Next Generation, Crypto currency based banking platform for the people in Kenya and Africa. KeniCoin will have wide acceptance because of its highly attractive features which are as follows:

- **Facilitates cashless transactions with great speed of execution.**
- **Technologically Advanced and Secured way of payments to different vendors for all services and products.**

- **High Return on Investment for the people buying KeniCoins due to its short supply and prospective higher demand in various business utilities.**
- **A better and flexible option for Small savings compared to the banks since it allows to save very marginal amount and provided interest for the savings.**

Today, market volatility is a known phenomenon. However, on the flip side, for those who display a decent amount of patience, it certainly presents opportunity and potential to generate future returns as well.

Like a cheery on the cake, KeniCoin has already planned to roll out an innovative tool that would not only help you all save but also get you rewarded substantially.

Keeping our investors' interest at the heart of the business, the innovative model has been crafted based on the key investment aspects such as Affordability, Timing the trade or the market appropriately and Flexibility.

Innovative Features of KeniCoin

Stability

KeniCoin is the only crypto-currency that is backed up by real businesses. It a currency entirely owned by a group of companies which enables it to remain reliable and predictable in the market.

Transaction Fee

Transacting with KeniCoin is FREE of charge which makes this currency one of the best currency to transact with.

Circulation

KeniCoin is the first cryptocurrency in the world to be released into the market with a group of businesses ready to transact using the cryptocurrency exclusively. This will go a long way into ensuring that KeniCoin remain in constant demand and with its limited amount in the market, the value of the KeniCoin must keep assuming upward trajectory as demand continue to soar.

Independence

Like all other cryptocurrencies, KeniCoin is neither restricted to any particular jurisdiction nor regulated by any particular central bank and therefore free of any government interferences and regulations. This makes peer-2-peer transactions across the borders be carried out seamlessly without interferences from any third party easily and instantly.

Inflation Ceiling

All KeniCoin holders are cautioned against inflation which is normally caused by a high appetite by the governments to continue printing fiat money. In our case, only 10 million KeniCoin's will be released to the market during ICO, the rest of the KeniCoins will be

released gradually into the system through mining once KeniCoin hits six figure digit value. The last coins of KeniCoins are expected to be released by the end of year 2050. Considering the number of affiliate companies that will be in constant consumption of the limited KeniCoins in the market, we believe the demand for KeniCoins will always be higher than the supply and therefore the upward trajectory of the KeniCoins value is definitely guaranteed.

Shopping

A good number of businesses have been set up with one objective in mind; consuming KeniCoin exclusively. With their huge discount of up to 40% off for those transacting in KeniCoin, we are very positive that, the number of KeniCoins we are releasing into the market are not enough to run these supportive businesses payment system. This shortage of the KeniCoins and the ever increasing demand of the same on the other side, will definitely lead to the skyrocketing of the value of KeniCoins by the day. We are very sure that, within the first 12 month after ICO, the value of KeniCoin will have increased at least 30 folds, which is around 3000%. This truth alone makes everyone want to be involved in procuring KeniCoins. In fact, we anticipate a shortage of KeniCoins at the 2nd phase of Crowd sale of our Tokens.

Security

KeniCoin is an Ethereum based ERC20 Token which is highly secured and is a globally accepted standard. All transactions performed using KeniCoin are broadcasted on the Ethereum Blockchain and are mined by the Ethereum Community.

KeniCoin ICO

KeniCoins are being offered by the promoters at a very marginal price during the ICO. After the ICO the KeniCoins will be available at a higher price band.

- **Earn a High ROI on your investment by buying KeniCoins in the ICO**
- **Hold the KeniCoins purchased during ICO for a year to reap enormous benefits of your wise and patient investment in KeniCoin ICO**
- **Purchased KeniCoins in the ICO to Trade KeniCoins on the KeniCoin Exchange for higher price**
- **Utilise KeniCoins at various platform developed by the promoters in the future which exclusive accept KeniCoins for payment transactions.**

Statistics of KeniCoin

Token name: KeniCoin

Token Ticker: KNC

Standards: Ethereum ERC20 Standard

Total Supply: 40,000,000

ICO Supply: 10,000,000

ICO Phase 1

April 2018
to
May 2018

1 KNC = 1 USD

ICO Phase 2

May 2018
to
June 2018

1 KNC = 2 USD

ICO Phase 3

June 2018
to
July 2018

1 KNC = 3 USD

ICO Phase 4

July 2018
to
August 2018

1 KNC = 4 USD

Distribution of Funds

- 20% Founders
- 50% Various Innovative Platform Development

Accepting KeniCoin as a payment

- 25% Marketing
- 5% Partners and Advisors
